

SCUBA Diver

Description: Divers have long limbs each ending with five digits, a round skull, a short nose, good binocular vision and are often covered in a wet suit. They are related to other marine mammals such as dolphins, whales, seals and sea lions.

Where they are Found: World-wide from shallow waters to 190 feet deep (for scientific research). Average divers range from 30-80 feet.

Diet: Their wide diet varies with each individual. Most are omnivores and many do not eat seafood.

Status in the ocean: Can be found year round but sightings increase on Saturdays and Sundays.

Reproduction: Nearly impossible in a full wetsuit.

WOW!!! SCUBA is an abbreviation for Self Contained Underwater Breathing Apparatus.
