

Horn Shark

Description: The horn shark has brownish-gray skin with black spots and ridges along each eye. It has a spine or horn located in the front of each dorsal fin.

Where they are Found: Horn sharks are found in kelp forests from central California to Baja California.

Diet: These sharks are nighttime feeders. They feed on fish, squid, crabs and sea urchins.

Defense: The horn shark has spines on its back and can camouflage in the kelp.

WOW!!! The horn shark lays spiral shaped eggs that they wedge between rocks for protection.
